ABSTRACT

This report presents information on the early career outcomes of college graduates, compiled from data received from 33 public and independent two-year and four-year colleges and universities in Michigan. The first section of the report presents statistical summaries for all degree levels; the second section covers statistics for minorities; and the last section covers teacher certificate graduates. College programs with high employment rates are listed, and yearly average starting salaries for all majors are reported. Findings of the study include: (1) approximately 12 percent of the bachelor's graduates were still unemployed 6 months after graduation; (2) the majority of graduates from the 1990-91 class found employment in Michigan; (3) of minority graduates, 61 percent were working full time, 16 percent were unemployed, 19 percent had continued their education, and 11 percent were working part time or were temporarily out of the work force; and (4) of graduates who received teaching certificates, 52 percent were working full time, a decrease of 4 percent from the previous year. Eleven tables present detailed statistical data. (JDD)

Michigan 1990-91 Report of Destinations presents information on the early career outcomes of college graduates at all degree levels, plus minority and teacher certificated graduates. The information in this report has been compiled from data received from 33 public and independent two-and four-year colleges and universities in Michigan.

Reporting institutions accounted for about the same number of graduates, based upon the total degrees conferred by degree level, as last year. However, the number of graduates providing information (responding to their institution's follow-up surveys) actually dropped, particularly for bachelor's and master's degree recipients. Thus, early destination information was available on fewer graduates (approximately 1,200 bachelor's degree recipients) than in 1989-90.

Lower response rates (a 10 percent decrease) can be attributed to the poor labor market that these graduates faced. The longer time required to find a job resulted in an increased number of graduates being unemployed at the time of many institutions' surveys--usually about six months after graduation. Unemployment and uncertainty about future plans are known to depress response rates. Throughout this report, readers should use caution when interpreting results because of possible sample size restrictions.

This report contains three sections. The first section presents the statistical summaries for all degree levels. Compiled statistics for minorities are located in the second section. The last section covers teacher certificate graduates.

ALL GRADUATES

Institutions supplying data for this report accounted for approximately 26 percent, 63 percent, 44 percent, and 41 percent of associate's, bachelor's, master's and doctoral degrees, respectively, conferred in the 1990-91 academic year. As the summary table indicates, the number of graduates responding to their institution's follow-up inquiries ranged from 18 percent at the associate level to 32 percent at the bachelor's. The response rate among reporting institutions hovered around 50 percent with the exception of the associate's level.

<u>Degree</u>	<u>Total Degrees Conferred</u>	<u>Number of Grads Reported</u>	<u>Number of Grads Responding</u>	<u>Reported Grads as a % of Conferred</u>	<u>Responding Grads as a % of Conferred</u>	<u>Responding Grads as a % of Reported</u>
Certificate	NA	NA	673	NA	NA	NA
Associate's	21,731	5,708	4,043	26	18	70
Bachelor's	44,253	28,073	14,215	63	32	50
Master's	14,172	6,254	2,807	44	19	44
Doctoral/ Professional	4,004	1,643	629	41	15	38

Tables 2, 4, 6, and 8 compare data on degrees conferred (information provided by the State of Michigan) with aggregated figures from participating institutions. For each degree level, major classification of instructional programs (CIP) or curriculum groups are listed. In a few cases, State figures exceeded reported numbers. These discrepancies appear to result from changes in CIP classifications and accounting problems.

Curriculum areas providing the best responses (respondents as a percentage of degrees conferred) include communications technology, engineering, and agriculture at the bachelor's level; agriculture, home economics, and liberal studies at the master's level; and communications at the doctoral level.

EARLY DESTINATIONS

After completing their degrees, graduates can either be employed full-time, pursuing further education, or seeking employment. These three categories captured the majority of graduates as reported in Tables 1, 3, 5, 7, and 9. If the three categories (employed full-time, unemployed, and school) in any row do not total 100 percent, the remaining graduates have been placed in an "other" category. The "other" group consists of foreign students who returned to their home countries, individuals who were unemployed but not seeking work or working part-time.

Summarizing from the degree level tables, more than 60 percent of all reported graduates were working full-time. The exception was for associate degree's where a higher percentage of graduates were continuing their education, 32 percent, than the other groups. The percentage of bachelor's graduates continuing their education rose noticeably, an increase of five percent from 1989-90.

Approximately 12 percent of the bachelor's graduates were still unemployed some six months after graduation: an increase of four percent from 1989-90. Master's graduates who were unemployed also rose slightly from five percent in 1989-90 to seven percent in 1990-91.

Degree	% Working Full-Time	% Continuing Education	% Unemployed	% Other
Certificate	74	10	5	9
Associate's	55	32	5	5
Bachelor's	67	16	12	6
Master's	80	10	7	5
Doctoral/Professional	91	6	3	1

FULL-TIME EMPLOYMENT

The number of graduates engaged in full-time employment can vary widely within a major CIP category. Programs with high employment rates (generally greater than 75 percent) have been identified. To insure that these programs are representative, only programs with 50 or more graduates (ten for the Doctoral level) have been included in the following list. It should be noted that many advanced degree recipients were working while they earned their degrees (i.e. teachers) and simply continued their employment after graduation.

Full-Time Employment

CIP with 75 Percent Employed

Associate's:

Management Science, Accounting and Computing, Executive Secretarial, Industrial Technology, Dental Hygiene, Radiograph Medical Technology, and Nursing.

Bachelor's:

Packaging, Accounting, Banking and Financing, Business Administration, Material Management and Purchasing, Institutional Management, Management Information Systems, Management Science, Marketing Management, Trade and Industrial Management, Office Supervision, Sales, Business Marketing, Telecommunication, Computer and Information Sciences, Special Education, Engineering (General), Industrial Production, Automotive Technology, Physical Therapy, Nursing, Pharmacy, Textiles and Clothing (Retail), Fine Arts Studies, and Parks and Recreation Management.

Masters:

Business Administration, Labor and Industrial Relations, MBA (Non-Technical), MBA (Technical), Marketing, Advertising, Computer and Information Science, Education (General), Curriculum and Instruction, Elementary and Secondary Education Administration, Special Education, Student Counseling, Elementary Education, Pre-Elementary Education, Health Education, English Second Language, Electrical Engineering, Mechanical Engineering, Nursing, and Social Work.

Doctoral:

Education Administration, Higher Education Administration, Electrical Engineering, Mechanical Engineering, Human Medicine, Optometry, Osteopathic Medicine, Veterinary Medicine, Law, Chemistry, Physics, Psychology, and History.

UNEMPLOYMENT

When graduates were still seeking employment at the time their institutions administered their surveys, the graduates were classified as unemployed. Depending on the survey strategies used by participating institutions, this category best reflects those graduates who had not received job offers by six months after graduation.

The small number of responses for many academic majors can result in programs with high unemployment rates. The rates may be misleading and not be representative of all graduates in that curriculum. Focusing on programs with large number of graduates, unemployment appeared to be more of a problem for bachelor's recipients than other degree levels, while some programs reported full-time employment rates above 75 percent. Remaining graduates could have difficulty finding employment. Bachelor's programs with more than 50 graduates that reported unemployment above the average of 12 percent included:

Accounting, Banking and Finance, Business Administration, Material Management and Purchasing, Human Resource Development, Office Supervision, Business Marketing, Sales, Communications, Advertising, Journalism, Public Relations, Telecommunications, Computer and Information Science, Elementary and Secondary Administration, Social Science Education, Aerospace Engineering, Civil Engineering, Electrical Engineering, Industrial Production, Spanish, Textile and Clothing (Retail), Humanities and Social Science, Correctional Administration, Criminal Justice, Law Enforcement, Public Administration, Social Work, and Social Science.

EMPLOYMENT LOCATION

Where do graduates find work? Do they leave Michigan? An educated work force is an important factor for a strong economy. The majority of graduates from the 1990-91 class found employment in Michigan--above 75 percent. More associate and bachelor's degree recipients remained in the state than in 1989-90. The only noticeable changes was among the doctoral/professional where about five percent more than in the previous year left the State. The destinations of some graduates, particularly certificate and associate graduates were not known.

<u>Degree</u>	<u>% Employed in Michigan</u>	<u>% Employed Outside Michigan</u>	<u>% Not Known</u>
Certificate	84	0	15
Associate's	87	2	10
Bachelor's	77	17	5
Master's	86	7	5
Doctoral/ Professional	77	20	1

STARTING SALARIES

Yearly average starting salaries for all majors are reported in Tables 1, 3, 5, 7 and 9. A summary of average starting salaries for major CIP codes are presented on the next page. Because of the small number of salaries reported in some curriculum areas and different levels of work experience prior to graduation, care needs to be exercised when generalizing from these figures, particularly for certificates, masters, and doctoral programs. Life-long education graduates, many who are employed while attending school, can be found in the general liberal studies category. It should also be noted that salary figures have not been adjusted for less than full-time employment, start-up time for private consulting practices or businesses, nor internships or short-term training programs required by some companies before being placed on full-time status.

When comparing degree level averages between 1989-90 and 1990-91, slight declines were observed for associate's and bachelor's graduates; master's graduates increased slightly; and doctoral graduates saw improvement of approximately 7 percent. One curriculum area that experienced a major shift in salaries was engineering and related technologies. Average salaries decreased from \$32,341 in 1989-90 to \$27,567 at the bachelor's level (a decline of \$4,774); at the master's level, the decrease was nearly \$9,000.

Salaries reported in this document account for individuals who entered the workforce immediately after graduation. Programs, such as dietetics, which require a fifth year or a residency to be certified to practice in the field, may not have representative salary information. The salaries reported for these programs may not reflect the salaries commanded at the completion of the accreditation program.

MINORITY GRADUATES

The institutions that provided statistics on minority graduates reported a total of 1,010 minority students graduated in 1990-91. This represented 32 percent of the total minority degrees conferred in this academic year, according to data compiled by the post-secondary information unit of the Michigan Department of Education (see Degree Completions for Michigan Colleges and Universities, 1991). Of those students reported, 251 completed follow-up queries from their institutions. While this represented a 25 percent response rate, this group only comprised 9 percent of the total graduating population of minority graduates overall. These figures are considerably lower than numbers reported in previous years.

The following table presents a summary of the minority statistics grouped by major CIP group. Approximately 61 percent were working full-time, 16 percent were unemployed some six months after graduation, 19 percent had continued their education, and 11 percent were either working part-time or temporarily out of the work force ("Percent Other"). Slightly more than 83 percent of the graduates remained in Michigan to work; this was an increase of 16 percent from 1989-90, returning this figure to 1988-89 levels. Also, if one considers only those fields where unemployment was reported, the average unemployment rate was 14 percent.

Differences appeared among some CIP groups. Looking at groups with large numbers of respondents reporting information, agriculture, engineering, and health sciences enjoyed higher than average full-time employment rates. Unemployment was noticeably higher in fields such as business, home economics, communications, psychology, and protective services.

The average starting salary was \$27,618 for minority bachelor's degree graduates. This average was based on salary data provided by only 103 graduates or 41 percent of respondents. However, the reporting population only represents 5 percent of the total minority graduating population. If comparisons for curriculum areas are made between 1988-89, 1989-90, and 1990-91, some wide fluctuations are observed. For example, education salaries were dropped several thousand dollars between the three years. These shifts do not necessarily portend short term trends. Rather these figures captured fluctuations between small, dissimilar populations. Caution needs to be exercised when interpreting these figures, particularly for academic programs where only a small number of graduates have reported information.

TEACHER CERTIFICATES

The reporting institutions accounted for 1,232 graduates who received teaching certificates in 1990-91 (a drop of 31 percent in the number reported from 1989-90). This total can be broken into two categories: 813 graduated in fields listed under CIP 13 (Education) and 419 from other curriculum areas. These latter graduates primarily received degrees in fields taught at the secondary level. In the 1991 degree completion report prepared by the Michigan Department of Education (Degree Completions for Michigan Colleges and Universities 1990, Postsecondary Information Unit), 3,419 students graduated in CIP 13. This report captured approximately 24 percent of these graduates. There is no available method to determine what proportion of the secondary level teaching certificates were counted in this report.

Approximately 52 percent of the respondents were working full-time. This was a decrease of 4 percent from the previous year. However, a significantly lower number of graduates were employed in education, 60%, than in the previous year where only 74% reported working in education.

The lower response rate and lower level of graduates involved in full-time employment reflects in part a poor education labor market. Because the job market has been tight for starting teachers, many new teachers found themselves working part-time as substitute teachers. Approximately 24 percent of those reporting in 1990-91 indicated they were working part-time (other, as defined for the degree level tables, is not used in this section. If the total percentage of those working full-time, unemployed, school, and part-time fails to total 100, the difference can be attributed to students not seeking employment or returning to their home country. Rounding also needs to be considered). The number of part-time workers remained about the same as compared to the previous year. The evidence strongly suggests that a significant number of new teachers were initially only working in a substitute capacity.

Nearly 86 percent of those working full-time were residing in Michigan. This rate is slightly higher than all bachelor's degree recipients (77 percent). Knowing that Michigan's labor market has been very tight, the high percentage finding Michigan jobs is encouraging. Again the low response to the surveys suggest that many teacher certificate graduates are still looking for employment, probably within the state. Even outside the state, teaching opportunities have been restricted as many states, in areas where Michigan graduates often look for openings, have faced tightening fiscal conditions. Starting salaries averaged \$22,007, generally ranging from \$18,000 to \$27,000. This year's average was slightly higher than the 1989-90 average of \$21,007.

Some caution should be taken when using these salary figures. Even though 90 percent of those working full-time reported salaries, the low number of observations make it difficult to generalize to the total population. For majors with a large number of observation, i.e. elementary education, the starting salary figures may be more representative.

The following table highlights the outcomes for selected teacher education programs (approximately 50 graduates reported). Graduates from special education reported the highest rates of full-time employment and the lowest rates in part-time employment and unemployment. The lowest full-time employment rates were reported by physical education, general science, social science, elementary education, and biology graduates.

For those working full-time, the percentage actually employed in education varied widely. Some majors, such as special education and child development, have alternative career paths outside of school systems. While there may be a reluctance on the part of new graduates to leave Michigan, advisors should especially encourage new teacher education graduates to consider looking to other states for employment in other states. After gaining experience, these teachers may be more competitive for positions in Michigan.

NOTES

1. Data contained in these follow-up reports vary from year to year depending on the mix of schools participating and the response rates each school obtained from their individual surveys. In some cases, an institution had several placement offices, all of which were not able to supply data to this report. From the University of Michigan, an institution with a decentralized placement function, the Engineering Placement and Career Planning and Placement offices provided data for this report. The latter office provided general career counseling to all students with the largest percentage from the School of Literature, Sciences and the Arts. Only students who used their services participated in the follow-up study. The figures supplied by these two offices from the University of Michigan only represent their clientele and may not be representative of students from the entire University.

2. Throughout this report, curriculum areas are listed by their classification of instructional programs (CIP) code that brings together similar programs based upon program purpose and program category. For further discussion see the Michigan Postsecondary Admissions and Financial Assistance Handbook, Michigan State Board of Education, 1985, pp. 164-66.

The Collegiate Employment Research Institute was established by Michigan's Legislature in 1984. The Institute is charged with the task of examining issues on career development and employment for college graduates. Various projects are underway, including the study covered in this report, to provide information to educators and counselors for program development. If you have any questions on this study or any Institute project, please contact the Institute directly.

Vernicka K. Tyson
Acting Director
Career Development and Placement Services

L. Patrick Scheetz, Ph.D.
Assistant Director, Career Development and Placement Services;
Director of the Institute

Philip D. Gardner, Ph.D.
Assistant Director, Career Development and Placement Services;
Research Administrator of the Institute
